## Quantitative Ability (Part 5 of 9)

Doorsteptutor material for CMAT is prepared by world's top subject experts: [get questions, notes, tests, video lectures and more \[https://www.doorsteptutor.com/Exams/CMAT/\]](https://www.doorsteptutor.com/Exams/CMAT/) - for all subjects of CMAT.

Directions: Answer these questions on the basis of the information given below:

Cities A and B are in different time zones. A is located 3000 km east of B. The table below describes the schedule of an airline operating non-stop flights between A and B. All the times indicated are local and on the same day.

Departure	Departure	Arrival	Arrival
City	Time	City	Time
B	8: 00 AM	A	3: 00 PM
A	4: 00 PM	B	8: 00 PM

*Table Supporting: Quantitative Ability (Part 5 of 9)*

Assume that planes cruise at the same speed in both directions. However, the effective speed is influenced by a steady wind blowing from east to west at 50 km per hour.

- What is the time difference between A and B?
  - 1 hour
  - 1 hour and 30 minutes
  - 2 hours
  - 2 hours and 30 minutes
  - Cannot be determined

◦ Answer: a
- What is the plane's cruising speed in km per hour?
  - 500
  - 700
  - 550
  - 600
  - Cannot be determined.

◦ Answer: c

3. Consider four digit numbers for which the first two digits are equal and the last two digits are also equal. How many such numbers are perfect squares?

a. 1  
b. 3  
c. 2  
d. 4  
e. 0

○ Answer: a

4. In a tournament, there are  $n$  teams  $T_1, T_2, \dots, T_n$ , with  $n > 5$ . Each team consists of  $k$  players,  $k > 3$ . The following pairs of teams have one player in common:  $T_1$  &  $T_2$ ,  $T_2$  &  $T_3$ , ...  $T_{n-1}$  &  $T_n$ , and  $T_n$  &  $T_1$ . No other pair of teams has any player in common. How many players are participating in the tournament, considering all the  $n$  teams together?

a.  $(n - 1)(k - 1)$   
b.  $n(k - 1)$   
c.  $k(n - 1)$   
d.  $n(k - 2)$   
e.  $k(n - 2)$

○ Directions: Answer these questions on the basis of the information given below:

- Let  $a_1 = p$  and  $b_1 = q$ , where  $p$  and  $q$  are positive quantities. Define  $a_n = pb_{n-1}$ ,  $b_n = qb_{n-1}$ , for even  $n > 1$ , and  $a_n = pa_{n-1}$ ,  $b_n = qa_{n-1}$ , for odd  $n > 1$ .

■ Answer: b

5. Which of the following best describes  $a_n + b_n$  for even  $n$ ?

a.  $q(pq)^{\frac{1}{2}n-1}(p+q)^{\frac{1}{2}n}$   
b.  $q(pq)^{\frac{1}{2}n-1}(p+q)$   
c.  $qp^{\frac{1}{2}n-1}(p+q)$   
d.  $q^{\frac{1}{2}n}(p+q)$   
e.  $q^{\frac{1}{2}n}(p+q)^{\frac{1}{2}n}$

○ Answer: b

6. If  $p = \frac{1}{3}$  and  $q = \frac{2}{3}$ , then what is the smallest odd  $n$  such that  $a_n + b_n < 0.01$ ?

a. 15  
b. 7  
c. 13  
d. 11  
e. 9

- Answer: e
