Generally law student was not taking Last Preparation as much seriously because busy seduce at work or at school, but only you need to spend hours on weekends and talking endless number of practice tests.

Test is very important part of preparation because it is best thing to keep your mind always ready for LAST test, practice all different section regularly or weekly in a test that expert says.

Andrew Brody, national content director for LSAT programs analyze preparing for the LSAT to training for a marathon. He always inspires students to keep their minds sharp at all times, but not to overwork them. "You wouldn't run a marathon every day to train for a marathon," he says. "But you also wouldn't do nothing all week and then run miles and miles on the weekend. You do a little bit of focused work [everyday] to keep yourself in shape with occasional long runs-or practice tests-mixed in."

Experts say, Help yourself, not your buddy Rather than any other standardized test the LSAT exposes your personal strengths and weaknesses more clearly while there are benefits to studying anything with a friend. Given the analytic nature of most questions, what comes easily to one person may prove to be a challenge for their friend.

Studying in a group can be destructive; it might be possible that it will not focus on your significant weakness. Because the test will judge you on the basis of your logic and thinking not on the base of content, so some times cramming with a friend is of little benefit.

It will be fun and best to learn those questions which are more difficult to solve or remember according to you, try to solve this kind of questions alone or with the help of internet. Because of LAST is skilled-base test "every student is unique," says Jeff Thomas, director of pre-law programs at Kaplan Test Prep and Admissions. "If a student and a buddy are prepping for the LSAT and if they go along the same course of action, same assignments, same prep exercises, they're going to have immensely different results. Every student is different."

Due to the unfamiliar nature of many questions you would have to practice more and regularly to get addicted from them, only practice is not enough testing is also play important part as per expert says. After you do timely practice and sections and test, also get record of your score for every test.

Focus on the entire questions in which you missed and try to detect the problem for the wrong answer.

Those students who have get high scores on the test note that practice without analysis leads to little improvement. "A lot of students take a prep course and assume it's the course's job or the teacher's job to make the learning easy for them, like they don't have to do the work," says Cody Goering, who received a 173 on the LSAT and will be attending Harvard Law School this fall. "They never actually look at the ones they miss. If you really want to improve that's really the most effective way to improve-to review every question that you miss and understand why you miss it before you move on."

Sharpen difficult thinking which you face in class. Which you have learned in 8th standard or in collage will not the part of the LAST test, some college classes can help you get in the right mindset to tackle the test.

Logic, philosophy, or critical writing classes can help you to prepare for the test because they require you to analyze complicated theories or texts and present ideas gleaned from those texts in a concise and logical manner, which is similar to what the LSAT demands.

Experts note that these classes are not the base of LAST test but if you have learn this then this will helps you in even if it is of few points and they can make difference.

Approximately what you learn in these classes that doesn't matters, but how you learn to understand and express complex concepts. "Any course that requires lots of dense reading on unfamiliar topics is helpful, as the LSAT's reading comprehension topics are specifically chosen to be areas with which few test takers have any prior familiarity," says Steve Schwartz, an independent LSAT tutor and author of an LSAT Blog. "Being comfortable with dense passages on new topics is very helpful when the LSAT suddenly throws you a curveball topic on test day."

Testing experts agree that the test's analytical reasoning, or "logic games" section, is one of the most difficult sections for students to wrap their minds around initially because it's vastly different from anything else they've seen on standardized tests so that be sure to play games before the test.

Their will be four games with five to seven questions in each section that require students to understand complex hypothetical relationships between multiple parties or objects.

Diagram the relationships is a straightforward way to solve these so they can be more easily visualized and understood than what can be garnered from simply reading the text and answering the questions.

There is no penalty for getting an incorrect answer on the LSAT just like SAT so answer everything, so it's important to at the very least make an educated guess on each question rather than leaving it blank because it does you no good.

Every question is weighted the same. Hard questions are similarly getting count in the final score so don't let it go and continuously try to answer the difficult ones. Give the priority to easy questions as many as you can revisit it until you solve them within your remaining time.

As your time expires be much careful to tackle questions that are in your wheelhouse first and guess on the harder ones than to exit on the difficult ones and rush through simpler ones, there is possibility due to crisis of time that you should miscalculate some questions.

Know where to find the easier questions. According to the LSATs structure, the questions will become harder in a succession in the analytical reasoning and reading comprehension (awareness) sections.

Generally the case that the first logic game is simpler than the next and the first reading passage will be easier to discern than the next ones. Complexity of questions will increase as you get deeper into the test In the logical reasoning sections, but ultimately elevation in the middle and the sections become easier near the end, according to Thomas. "It rewards the test taker that understands there are easy ones to be had in the back of the section," he says. "When it gets harder toward the middle, it's often advantageous to go to the back and work backward."
