(A) MMPI.

(B) CPI.

(C) SVIB.

(D) WISC-R.

(E) Luria-Nebraska.

Answer: D

79. "Hypnosis is a form of voluntary behavior designed to evoke a desired consequence. Such behavior is merely a manifestation of an increase in motivation. Hypnosis is not an altered state of consciousness." This statement comes closest to representing the position of:

- (A) Mesmer.
- (B) Freud.
- (C) Hilgard.
- (D) Skinner.
- (E) Spanos.

Answer: E

80. In the Hopi culture infants are bound to cradleboards during the first three months of life. The effect of this procedure on their learning to walk is that:

- (A) It retards the onset of walking.
- (B) It facilitates walking.
- (C) It accelerates the beginning of toddling.
- (D) Hopi children spend much more time crawling and begin to walk later than children who were not so bound.
- (E) It has no effect on subsequent walking.

Answer: E

81. The sound “da” uttered by an infant is an example of:

- (A) A filled pause.
- (B) A phoneme.
- (C) A morpheme.
- (D) A semantic equivalent.
- (E) A lexical marker.

Answer: B

82. To investigate whether intelligence can be altered through environmental variables, a researcher would most likely compare:

- (A) Fraternal twins reared apart.
- (B) Immigrant children reared in their non-native countries with non-immigrant children.
- (C) Samples of closely related children with samples of unrelated children.
- (D) Children raised by their biological parents with children raised by foster parents.
- (E) Identical twins raised in orphanages with identical twins raised in families.

Answer: A

83. Experiments by the Harlows with monkeys reared by wire and cloth mothers showed that when frightened:

- (A) The monkeys clung to the mother that fed them.
- (B) The monkeys clung to each other, avoiding the inanimate mothers.
- (C) The monkeys clung to the cloth mother.
- (D) The monkeys became immobilized and lost a great of contact with reality.
- (E) The monkeys exhibited behavior typical of experimental neurosis.

Answer: C

84. Of the following schedules of reinforcement, the highest response rates are maintained through a:

- (A) Partial schedule.
- (B) Continuous schedule.
- (C) Spontaneous schedule.
- (D) Noncontingent schedule.
- (E) Random schedule.

Answer: A

85. In the Skinner paradigm, operant behavior is controlled through:

- (A) Chaining.
- (B) Reinforcement.
- (C) Punishment.
- (D) Shaping.
- (E) Stimulus generalization.

Answer: B
