The USMLE in their bulletin publishes a topic breakdown by organ system and subject.

- Before you start studying for the exam, go through the following and review this information.
- The paper is set containing questions of Pathology and Pharmacology (40%+ together) . The lesser portion deals with questions related to Pathophysiology/Physiology (20%) .
- The remaining 15 – 20% of the portion is covered by questions of Biochemistry and Genetics.
- The question paper focuses nominally on topics related to Anatomy, Histology, Epidemiology, Nutrition and Embryology (usually 10 – 15% total for all of them) .
- It will be useful to you if you focus on the portions that form a larger component in the test instead of spending more time on the smaller components of the test paper.
- This does not mean you are to disregard any portion but yes manage well your allotment of time.
