

UGC NET 2019

Test Time	2:30 PM - 5:30 PM
Test Date	04/12/2019
Subject	07 Anthropology

Section : PART I General Paper

Comprehension:

The following table presents the data on the number of vehicles of three different types (A, B and C) produced by a company during seven different years from 2012 to 2018. Based on the data in the table, answer the questions 1-5:

Year-wise production of three types of vehicles

Year	Year - wise production of three types of vehicles		
	Vehicle	A - Type	B - Type
2012	5000	20000	15000
2013	15,000	19000	22500
2014	10,000	15000	30000
2015	17,500	15000	23000
2016	25,000	20,000	15000
2017	13,000	25,000	20000
2018	30,000	35,000	25000

SubQuestion No : 1

Options 1-1

- 2.2
3.3
4.4

Comprehension:

Read the following passage and answer questions which follow.

Even though globalisation is one of the most discussed topics in the contemporary world, it is not altogether a well defined concept. A multitude of global interactions are put under the broad heading of globalisation, varying from the expansion of cultural and scientific influences across borders to the enlargement of economic and business relations throughout the world. A wholesale rejection of globalisation would not only go against global business, it would also cut out movements of ideas, understanding, and knowledge that can help all the people of the world, including the most disadvantaged members of the world population. A comprehensive rejection of globalisation can thus be powerfully counterproductive. There is a strong need to separate out the different questions that appear merged together in the rhetoric of the anti-globalisation protests. The globalisation of knowledge deserves a particularly high profile recognition, despite all the good things that can be rightly said about the importance of 'Local knowledge'.

Globalisation is often seen, both in journalistic discussions and in remarkably many academic writings, as a process of westernization. Indeed, some who take an upbeat view of the phenomenon even sees it as a contribution of Western civilization to the world.

Q.80 Match the fossils in List - I with the countries in which they were first discovered in**List - II :**

List-I	List-II
(a) <i>Giganthropithecus</i>	(i) France
(b) <i>Homo floresiensis</i>	(ii) South Africa
(c) <i>Australopithecus</i>	(iii) Indonesia
(d) <i>Dryopithecus</i>	(iv) China

Choose the correct option from those given below :

- (1) (a)-(i), (b)-(ii), (c)-(iv), (d)-(iii)
 (2) (a)-(ii), (b)-(iii), (c)-(i), (d)-(iv)
 (3) (a)-(ii), (b)-(i), (c)-(iv), (d)-(iii)
 (4) (a)-(iv), (b)-(iii), (c)-(ii), (d)-(i)

Options 1. 1

Comprehension:

Read the passage below and answer the questions that follow :

Most of the comparative research on the relationship between economic development and political participation has been cross-national, comparing data on different countries. Some countries are more democratic than others, on the basis of such characteristics as contested elections, an elected head of state, an elected powerful legislature, and the protection of civil liberties. In capitalist countries, more democracy is generally associated with higher levels of economic development, as measured by indicators such as per capita output. In countries that are not very industrialized there is little democracy at the national level. Why should more democracy be associated with more economic development? The prevailing opinion is that economic development increases the degree of social equality in the country; and the more equality among interest groups, the more they demand participation in the political process, and hence more democracy. Or, to put this theory another way, as the economy develops, the more the middle and working classes can demand rewards and power, and therefore the less power the elite can retain.

What about the societies usually studied by anthropologists? We know that some of the highest levels of political participation occur in the least complex societies, such as foraging societies. Many adults in such societies have a say in the political decisions and leadership is informal. Leaders can retain their roles only if people voluntarily go along with them. Concentrated power and less political participation are more likely in chiefdoms and states than in band and tribal societies. The more hierarchical chiefdoms and societies usually depend on agriculture, which can produce more goods and services per capita than foraging economies can. So the relationship between economic development and political participation in the cross-cultural studies is opposite to what we find cross-nationally.

SubQuestion No : 91

Q.91 Which of the following is the characteristic of more democratic countries?

- (1) An elected head of state
- (2) A nominated head of state
- (3) A head of state based on inheritance
- (4) The country without a head of state

Comprehension:

Read the passage below and answer the questions that follows :

So much is known about molecular genetics that it is now possible to alter individual genes and even whole organisms in very precise ways. The revolution occurred very quickly after the structure of DNA was first identified in 1953 by James Watson and Francis Crick. Particular genetic traits could then be linked to particular sequences of DNA messages. In the 1970s, the development of recombinant DNA techniques allowed researchers to splice pieces of DNA from one organism into the DNA of another, in precise locations. Researchers learned how to make copies by putting these "recombined" strands into host organisms such as bacteria, which reproduce by cloning. The applications of these techniques are potentially enormous. Biotechnology companies are already doing genetic engineering to manufacture medicines (such as insulin and a vaccine against hepatitis B) and to produce more desirable plant and animal products (e.g., a strain of tomato that can be shipped when it's ripe without spoiling). They are also working on how to reintroduce altered cell into organisms to fix genetic defects. As of now, about 4,000 human disorders are known to be caused by defects in a few genes; theoretically, they should be fixable some day by genetic engineering. As more becomes known about the precise location of genes and the DNA sequences that convey particular information, much more engineering will be possible.

Already some imagine that genetic therapy will eventually cure various cancers and heart diseases.

SubQuestion No : 96

Q.96

How many disorders are known to be caused by defects in a few genes?

- | | |
|------------------|------------------|
| (1) About 25,000 | (2) About 20,000 |
| (3) About 10,000 | (4) About 4,000 |

As of now, about 4,000 human disorders are known to be caused by defects in a few genes; theoretically, they should be fixable some day by genetic engineering. As more becomes known about the precise location of genes and the DNA sequences that convey particular information, much more engineering will be possible.

Already some imagine that genetic therapy will eventually cure various cancers and heart diseases.

SubQuestion No : 99

Q.99

Which technique is used for manufacturing insulin?

- | | |
|-------------------------------|--------------------|
| (1) PCR | (2) DNA sequencing |
| (3) Recombinant DNA technique | (4) FISH |

Options 1. 1

- 2. 2
- 3. 3
- 4. 4

Question Type : MCQ

Question ID : 6154758589

Option 1 ID : 61547533485

Option 2 ID : 61547533486

Option 3 ID : 61547533487

Option 4 ID : 61547533488

Status : Answered

Chosen Option : 3

Comprehension:

Read the passage below and answer the questions that follows :

So much is known about molecular genetics that it is now possible to alter individual genes and even whole organisms in very precise ways. The revolution occurred very quickly after the structure of DNA was first identified in 1953 by James Watson and Francis Crick. Particular genetic traits could then be linked to particular sequences of DNA messages. In the 1970s, the development of recombinant DNA techniques allowed researchers to splice pieces of DNA from one organism into the DNA of another, in precise locations. Researchers learned how to make copies by putting those "recombined" strands into host organisms such as bacteria, which reproduce by cloning. The applications of these techniques are potentially enormous. Biotechnology companies are already doing genetic engineering to manufacture medicines (such as insulin and a vaccine against hepatitis B) and to produce more desirable plant and animal products (e.g., a strain of tomato that can be shipped when it's ripe without spoiling). They are also working on how to reintroduce altered cell into organisms to fix genetic defects. As of now, about 4,000 human disorders are known to be caused by defects in a few genes; theoretically, they should be fixable some day by genetic engineering. As more becomes known about the precise location of genes and the DNA sequences that convey particular information, much more engineering will be possible.

Already some imagine that genetic therapy will eventually cure various cancers and heart diseases.

SubQuestion No : 100

Q.100

Why much more genetic engineering is now possible?

- (1) Due to knowledge of Karyotyping
- (2) Due to knowledge of DNA sequences
- (3) Due to knowledge of Southern Blotting technique
- (4) Due to knowledge of Northern Blotting technique

Options 1. 1

- 2. 2
- 3. 3
- 4. 4

Question Type : MCQ

Question ID : 6154758591

Option 1 ID : 61547533493

Option 2 ID : 61547533494

Option 3 ID : 61547533495

Option 4 ID : 61547533496

Status : Answered

Chosen Option : 2
