

Database ?s

1. If you want to retrieve information from a database, what language do you use?
(SQL)
2. To retrieve information using SQL, what is the 1st word in your query? (select)
3. Why would you set up indexes on database tables? (speed up searching on a column; facilitate joins; speed up sorts)
4. How is a "cursor" used? (used for retrieving multiple rows from a table so they can be processed individually using a "fetch" statement)
